

Sales copy — Notion AI Stack (EN)

For the landing page (`/products/notion-ai-stack`) AND social CTAs.

H1 (hero)

The Notion dashboard that runs my business. \$15. Yours to build.

Sub-hero

5 databases, one command center, 3 weekly rituals — the exact setup I use to track my AI stack, clients, automations and prompts. Not a one-click template: the complete spec to build it in 30 min (or hand to your assistant).

Transparency note (highlight on the page)

⚠ **What you get:** the exhaustive spec + usage guide + JSON schema for every database.

What you don't get (for now): a one-click duplicatable Notion link — I'll send it to you free as soon as it's live (keep your order email). *Why? Because a good Notion template must live with you. With the spec, you understand what you're building — you can adapt it, evolve it, hand it to a designer.*

Value bullets (3 max)

- 🧠 **5 databases designed together:** AI Tools, Automation Backlog, Prompt Library, Clients, Projects — all connected

-  **A Command Center** showing you this week, top 3 automations, and clients to re-engage — without clicking
-  **3 short rituals** (Monday / Friday / 1st of month) that keep the dashboard from dying

Primary CTA

Get the spec — \$15 → [\(Gumroad\)](#)

Secondary CTA

Lifetime updates. Duplicatable Notion template coming free when ready.

Short variants (stories / posts / DMs)

Variant 1 — Curiosity gap

I finally merged everything into Notion. 5 databases, one command center. \$15.

Variant 2 — Challenge

Still switching between Google Sheets, Trello and Notion to run your business? I stopped. Here's how.

Variant 3 — Specificity

5 databases, 18 properties, 4 views per db, 3 weekly rituals. 30 min to build. \$15.

Variant 4 — Transparent pitch

It's not a one-click template. It's the exact spec of my setup. You build it in 30 min. \$15.

Post-purchase email

Subject: 📁 Your build blueprint (Notion AI Stack)

Body: Hey,

Here's your pack. Download here → [LINK_ZIP]

Inside:

- `template-spec-en.md` — full spec + quick build instructions
- `databases-schema.md` — every property in JSON
- `guide-en.md` — onboarding + rituals + integration ideas
- FR versions included

My advice: block **30 min tonight** to create just the `AI Tools` db. You already get value (you'll realize how much you actually spend). The rest can wait until tomorrow.

Once you've built it, reply to this email with a screenshot of your dashboard — I feature the best setups in my stories (with your permission of course).

And if you want to plug all this into n8n so it fills itself, that's exactly what we cover in Tier 2 (→ [LINK]).

Your move 🚀

— Manu @manuai.to

PS: as soon as the duplicatable Notion link is live, I send it to this address. Zero effort on your side.
