

How to use — Notion AI Stack

The dashboard I use to keep my business in control without Google Sheets everywhere. — Manu, [Taiyka](#)

What's in the pack

- `template-spec-en.md` — full spec to build the dashboard (30 min)
- `template-spec-fr.md` — French version
- `databases-schema.md` — JSON schema for each database (quick reference)
- **This guide** — onboarding + rituals + integration ideas

⚠ **Important:** this product is a **spec + guide**, not a one-click duplicatable Notion template. The reason is explained in `template-spec-en.md`. A duplicatable Notion link will be added when v1 is live — you'll get it free as an update (keep your order email).

Once the dashboard is built: where to start

Week 1 — populate the databases

Day 1 — AI Tools (15 min) List the 10 to 20 tools you actually use. One row per tool. Real monthly cost (not the sticker price if you have a deal).

Day 2 — Clients + Projects (20 min) All your active clients, recent past ones, and current prospects. For each client, list associated projects (even past ones).

Day 3 — Automation Backlog (20 min) Brain dump: everything you want to automate, even fuzzy ideas. Tag `Status = 💡 Idea` + `Impact` + `Effort`. You'll sort later.

Day 4 — Prompt Library (optional, 15 min) If you bought the **Prompt Pack 50**, import the CSV directly into this database. Otherwise, add your 5 most-used prompts.

Day 5 — Review + Command Center (10 min) Open the dashboard, check all views render correctly, adjust filters if needed.

The 3 rituals that make the dashboard alive

This dashboard is useless if you open it once a month. The rituals below take **less than 1h per week** and make all the difference.

Monday morning (15 min) — weekly planning

Open the Command Center and answer 3 questions:

1. What are the 3 deadlines this week? (`Projects → Timeline`)
2. Who do I need to re-engage? (`Clients → To re-engage`)
3. Which automation am I pushing this week? (`Automation Backlog → Top priorities`)

Block these items in Google Calendar. You just won the week.

Friday evening (20 min) — retro

Goal: clean closure.

- Mark delivered projects `Status = ✅ Delivered`
- Check `Paid = true` on what's been invoiced and received
- Write 3 post-mortem lines on each delivered project (what worked, what to change)
- Log in `Prompt Library → Notes / variants` the prompts you remixed this week

1st of month (30 min) — stack review

This is when you stop wasting \$200/mo on tools you never open.

- Open `AI Tools → Review queue`
 - For each row: does it actually serve me? Keep, downgrade, or churn?
 - Compute the total active stack cost
 - Compare to last month
 - Bonus: publish a "here's my stack this month" post — super easy content that works well
-

Integration ideas (step 2)

Once you're comfortable with the manual dashboard, you can plug in automations so **Notion fills itself**. 3 tested ideas:

1. Prospect form → Clients (easy)

- Tally or Typeform with fields: name, email, industry, need
- n8n triggers on new submit → creates a row in `Clients` with `Status = 👤 Prospect`
- Win: zero manual entry, context ready in Notion when you prep the call

2. Stripe payment → Projects (intermediate)

- Stripe webhook on `payment.succeeded`
- n8n matches customer email with a client → toggles `Paid = true` on the matching project
- Win: your billing database is always up to date

3. Claude agent reads your backlog (advanced)

- Every Monday 7am, an n8n workflow reads `Priority = 🔥 High` items from `Automation Backlog`
- Claude generates a mini attack plan for the top one (broken into concrete tasks)
- The output lands in a Notion block or directly in Telegram

- Win: you start the week with a plan, not a blank page
-

Mistakes to avoid

- ✗ **Creating a 6th database.** You think "I need a separate Leads db" — no, filter `Clients` by Status.
 - ✗ **Over-customizing statuses.** The suggested selects cover 95% of cases. If you add "🟠 Waiting feedback", "🟡 Review v2", etc., in 3 months you won't know what to pick. Stay simple.
 - ✗ **Filling for the sake of filling.** If a property is empty on 80% of rows, delete it. A healthy database has 80% fill rate on its key properties.
 - ✗ **Skipping the rituals.** The dashboard loses its value in 2 weeks without discipline. Block the 3 rituals in your calendar **now**, not later.
-

What's next?

- 🤖 **Automate the dashboard so it fills itself** (Stripe, Gmail, n8n → Notion)? → [Build Your First AI Agent \(\\$29\)](#)
 - 📊 **See how other solopreneurs use this dashboard + swap setups?** → [The Skool community](#)
