
Notion AI Stack — Complete template spec

The Notion dashboard I built for my own business. You rebuild it in 30 minutes from this spec. — Manu, [Taiyka](#)

Read this first

This file is **not** a one-click Notion template — it's the **exhaustive build blueprint** so you can build the dashboard yourself (30 min) **or** hand it off to someone.

Why? Because a truly good Notion setup lives with you — your databases, properties, and views must reflect **your** business, not mine. Follow this spec to the letter and you get the same result as a premium template, but you'll know exactly what's inside and why.

Dashboard overview

AI STACK – SOLOPRENEUR DASHBOARD	
COMMAND CENTER (home page)	
└	This week (auto-filtered tasks)
└	Automation backlog (top 3)
└	Monthly revenue (quick manual entry)
└	Shortcuts (links to the 5 databases)
DATABASES	
└	AI Tools (your stack)
└	Automation Backlog (workflows to build)
└	Prompt Library (linked to Prompt Pack 50)
└	Clients (light CRM)
└	Projects (deliverables, deadlines)
RITUALS	
└	Monday – weekly planning
└	Friday – retro
└	1st of month – stack review

Quick build instructions (30 min)

1. **(5 min)** Create a blank Notion page → title "AI Stack Dashboard"
2. **(15 min)** Create the 5 databases in order below (each as "Full page database")

3. **(5 min)** On the dashboard page, add 4 "Linked view of database" to show the right views in the right place
4. **(5 min)** Add static content blocks (rituals, shortcuts, notes)

Sections below give you **every property and every view** for each database.

Database 1 — AI Tools

Database name: `AI Tools` **Icon:**  **Role:** track every AI tool in your stack (paid/free, cost, usage)

Properties

Name	Type	Options / Format
Name	Title	—
Category	Select	LLM · Automation · Scraping · Content · Analytics · Voice · Image · Video · Other
Status	Select	Active · Testing · Churned · Watching
Monthly cost	Number	Format: Dollar (\$) or Euro (€)
Plan	Select	Free · Starter · Pro · Enterprise · One-time
Use case	Text	1 line — what you do with it
Used by workflow	Relation → Automation Backlog	Many-to-many
Used on project	Relation → Projects	Many-to-many
Login URL	URL	—
API docs	URL	—
Added on	Date	—
Last reviewed	Date	—
Notes	Text	Long comments

Views

1. Active stack (default)

- **Type:** Table
- **Filter:** `Status =  Active`
- **Sort:** `Monthly cost` descending
- **Shown properties:** Name, Category, Monthly cost, Plan, Use case

2. Cost by category

- **Type:** Board
- **Group by:** `Category`
- **Filter:** `Status ≠  Churned`
- **Shown properties:** Name, Monthly cost

3. Testing

- **Type:** Gallery
- **Filter:** `Status =  Testing`
- **Shown properties:** Name, Use case, Added on

4. Review queue (re-evaluate monthly)

- **Type:** Table
 - **Filter:** `Last reviewed < 30 days ago` OR empty
 - **Sort:** `Last reviewed` ascending
 - **Shown properties:** Name, Status, Monthly cost, Last reviewed
-

Database 2 — ⚡ Automation Backlog

Database name: Automation Backlog **Icon:** ⚡ **Role:** list workflows to build, prioritize them, track state

Properties

Name	Type	Options / Format
Name	Title	—
Status	Select	Idea · Planned · Building · Testing · Live · Killed
Priority	Select	High · Medium · Low
Impact	Select	High · Medium · Low
Effort	Select	S (1-2h) · M (half day) · L (1-3 days) · XL (1 week+)
Platform	Multi-select	n8n · Make · Zapier · Python · Custom · Claude Skill
Problem	Text	What problem it solves in 1 line
Solution	Text	How it works in 1 paragraph
Tools used	Relation → AI Tools	Many-to-many
For project	Relation → Projects	One-to-many
ROI estimate	Text	E.g. "saves 2h/week" / "\$1000/month"
Started on	Date	—
Live since	Date	—
Runtime URL	URL	Link to n8n, Make, etc.
Notes	Text	—

Views

1. 🔥 Top priorities (default)

- **Type:** Table
- **Filter:** `Status ≠  Live` AND `Status ≠  Killed`
- **Sort:** `Priority` then `Impact` descending
- **Shown properties:** Name, Status, Priority, Impact, Effort, Platform

2. 🛠️ In progress

- **Type:** Board
- **Group by:** `Status`
- **Filter:** `Status =  Building` OR `Status =  Testing`
- **Shown properties:** Name, Effort, Platform

3. Live

- **Type:** Table
- **Filter:** `Status =  Live`
- **Sort:** `Live since` descending
- **Shown properties:** Name, Platform, ROI estimate, Runtime URL

4. 💡 Ideas to triage

- **Type:** Gallery
- **Filter:** `Status =  Idea`
- **Shown properties:** Name, Problem, Impact

5. 🎯 Impact × Effort matrix

- **Type:** Board
- **Group by:** `Impact`
- **Sub-group by:** `Effort`

- **Filter:** Status = 💡 Idea OR Status = 📋 Planned
-

Database 3 — Prompt Library

Database name: Prompt Library **Icon:**  **Role:** prompt library (can be populated via Prompt Pack 50)

Properties

Name	Type	Options / Format
Title	Title	—
Category	Select	Content · Sales · Operations · Research · Customer Support · Internal
Use case	Text	1 line
Prompt	Text	Full prompt
Language	Select	FR · EN · Both
Favorite	Checkbox	—
Remixed	Checkbox	Check if you modified it for your own use
Model best for	Multi-select	Claude · GPT · Gemini · Local · n8n node
Used by workflow	Relation → Automation Backlog	Many-to-many
Last used	Date	—
Notes / variants	Text	—

Views

1. 📋 By category (default)

- **Type:** Gallery
- **Group by:** Category

- **Shown properties:** Title, Use case, Favorite

2. 🔥 Favorites

- **Type:** Table
- **Filter:** `Favorite = true`
- **Sort:** `Last used` descending
- **Shown properties:** Title, Category, Language, Last used

3. 🧪 Remixed prompts (my gold)

- **Type:** Gallery
- **Filter:** `Remixed = true`
- **Shown properties:** Title, Category, Use case

4. 🌐 By language

- **Type:** Board
 - **Group by:** `Language`
-

Database 4 — Clients

Database name: Clients **Icon:**  **Role:** light CRM to keep context on each client

Properties

Name	Type	Options / Format
Name	Title	Client or company
Status	Select	Prospect · In talks · Proposal sent · Active · Paused · Past
Industry	Select	SaaS · E-commerce · Agency · Local biz · Creator · Other
Primary contact	Text	First + last name
Email	Email	—
Language	Select	FR · EN · Other
Source	Select	Referral · Inbound · Outbound · Social · Event · Other
Projects	Relation → Projects	One-to-many
Total invoiced	Rollup → Projects.Price	Sum
First contact	Date	—
Last touch	Date	—
Next action	Text	E.g. "Follow up on the 15th"
Notes	Text	Context, preferences, watchouts

Views

1. 🟢 Active (default)

- **Type:** Table
- **Filter:** Status = 🟢 Active
- **Sort:** Last touch ascending
- **Shown properties:** Name, Industry, Primary contact, Last touch, Next action

2. 🔥 Pipeline

- **Type:** Board
- **Group by:** Status
- **Filter:** Status = 👁 Prospect OR Status = 💬 In talks OR Status = 📄 Proposal sent
- **Shown properties:** Name, Industry, Next action

3. 📅 To re-engage

- **Type:** Table
- **Filter:** Last touch < 14 days ago AND Status ≠ 🟡 Past
- **Sort:** Last touch ascending

4. 💰 Top clients

- **Type:** Table
 - **Sort:** Total invoiced descending
 - **Shown properties:** Name, Status, Total invoiced
-

Database 5 — Projects

Database name: Projects **Icon:**  **Role:** deliverables, deadlines, prices per project

Properties

Name	Type	Options / Format
Name	Title	—
Client	Relation → Clients	One-to-one
Status	Select	 Scoping ·  In progress ·  Review ·  Delivered ·  Paused ·  Cancelled
Type	Select	Automation · Consulting · Content · Build · Retainer · Training
Price	Number	Format: \$ or €
Invoiced	Checkbox	—
Paid	Checkbox	—
Start date	Date	—
Deadline	Date	—
Tools used	Relation → AI Tools	Many-to-many
Workflows built	Relation → Automation Backlog	Many-to-many
Deliverables	Text	Bulleted list of key deliverables
Post-mortem notes	Text	What worked / what to never do again

Views

1. 🛠 In progress (default)

- **Type:** Board
- **Group by:** `Status`
- **Filter:** `Status ≠ ☒ Delivered` AND `Status ≠ ☒ Cancelled`
- **Shown properties:** Name, Client, Price, Deadline

2. 📅 Timeline

- **Type:** Timeline
- **Start:** `Start date`
- **End:** `Deadline`
- **Filter:** `Status ≠ ☒ Cancelled`

3. 💰 Billing

- **Type:** Table
- **Filter:** `Invoiced = false` OR `Paid = false`
- **Sort:** `Deadline` ascending
- **Shown properties:** Name, Client, Price, Invoiced, Paid

4. 🏠 Delivered this quarter

- **Type:** Table
 - **Filter:** `Status = ☒ Delivered` AND `Deadline` this quarter
 - **Sort:** `Deadline` descending
-

Command Center (home page)

The main page contains, vertically:

Block 1 — Header

- **Callout** 🚀 with your quarterly mission (e.g. "Q2: reach \$10k/mo recurring")

Block 2 — This week

- **Linked view of** **Projects** — "Timeline" view filtered on current week
- Full page width

Block 3 — 2 columns side by side

Left column:

- Title: ⚡ Automations – top 3
- **Linked view of** **Automation Backlog** — custom view:
- Filter: **Priority** = 🔥 High AND **Status** ≠ ✅ Live
- Limit: 3 items

Right column:

- Title: 👤 Clients to re-engage
- **Linked view of** **Clients** — "To re-engage" view
- Limit: 5 items

Block 4 — 2 columns side by side

Left column:

- Title:  Active stack
- **Linked view of**  — "  Active stack" view
- Compact mode

Right column:

- Title:  Favorite prompts
- **Linked view of**  — "  Favorites" view
- Limit: 5 items

Block 5 — Rituals

- **Toggle list** with 3 entries:
-  Monday – weekly planning (15 min) → embedded checklist
-  Friday – retro (20 min) → embedded checklist
-  1st of month – stack review (30 min) → embedded checklist

Checklist contents: see **Rituals** section below.

Block 6 — Shortcuts

- **5 columns** with 5 clickable cards linking to each database:  AI Tools ·  Backlog ·  Prompts ·  Clients ·  Projects
-

Rituals — checklist contents

Monday (15 min) — weekly planning

- [] Open `Projects → Timeline` and identify this week's 3 deadlines
- [] Open `Clients → To re-engage` and list the 3 priority messages
- [] Open `Automation Backlog → Top priorities` and pick 1 workflow to push this week
- [] Block time slots in Google Calendar

Friday (20 min) — retro

- [] Mark delivered projects as ☒ Delivered
- [] Mark paid projects as `Paid = true`
- [] Add a short post-mortem on each delivered project (3 lines max)
- [] Log in `Prompt Library → Notes / variants` the prompts you actually used this week

1st of month (30 min) — stack review

- [] Open `AI Tools → Review queue` and process each row: `Last reviewed = today`
 - [] Identify 1 tool to churn (if `Status =  Testing` and rarely used)
 - [] Compute total cost of active stack → compare to last month
 - [] Publish 1 piece of content about your current stack (transparency = easy content)
-

Usage tips

- **Don't multiply databases.** 5 is the right number. Beyond that it becomes a graveyard.
 - **Filtered views > extra databases.** Instead of a "Leads" db, filter `Clients` by `Status = 🐼 Prospect`.
 - **Rollups are your friend.** `Total invoiced` per client auto-calculates. Zero double entry.
 - **Bidirectional relations:** verify each relation also appears in the target db (e.g. `Projects → Tools used` must show up from `AI Tools → Used on project`).
 - **Mobile capture:** on each db, create a "Quick capture" view with only `Name + Status + Notes` to add items in 5 seconds from your phone.
-

Possible integrations (for later)

- **n8n** → **Notion**: create a client from a Tally form → Notion creates the row automatically
- **Stripe** → **Notion**: when payment lands, `Paid = true` automatically
- **Claude** → **Notion**: an agent that reads your Automation Backlog and proposes the top 3 priorities every Monday morning

All of these are buildable with n8n + Notion API. That's exactly what we cover in Tier 2.

What's next?

- 🤖 **Plug your dashboard into n8n so it fills itself?** → [Build Your First AI Agent \(\\$29\)](#)
 - 📁 **See how other solopreneurs use this dashboard + share your own setups?** → [The Skool community](#)
-
